

$\text{\LaTeX}$ Author Guidelines for WACV Proceedings

Anonymous WACV Algorithms Track submission

Paper ID *****

Abstract

001 *The ABSTRACT is to be in fully justified italicized text, at*
002 *the top of the left-hand column, below the author and affil-*
003 *iation information. Use the word “Abstract” as the title, in*
004 *12-point Times, boldface type, centered relative to the col-*
005 *umn, initially capitalized. The abstract is to be in 10-point,*
006 *single-spaced type. Leave two blank lines after the Abstract,*
007 *then begin the main text. Look at previous WACV abstracts*
008 *to get a feel for style and length.*

009 1. Introduction

010 Please follow the steps outlined below when submitting
011 your manuscript to the IEEE Computer Society Press. This
012 style guide now has several important modifications (for ex-
013 ample, you are no longer warned against the use of sticky
014 tape to attach your artwork to the paper), so all authors
015 should read this new version.

016 1.1. Language

017 All manuscripts must be in English.

018 1.2. Dual submission

019 Please refer to the author guidelines on the WACV 2026
020 web page for a discussion of the policy on dual submissions.

021 1.3. Paper length

022 Papers, excluding the references section, must be no longer
023 than eight pages in length. The references section will not
024 be included in the page count, and there is no limit on the
025 length of the references section. For example, a paper of
026 eight pages with two pages of references would have a total
027 length of 10 pages. **There will be no extra page charges**
028 **for WACV 2026.**

029 Overlength papers will simply not be reviewed. This in-
030 cludes papers where the margins and formatting are deemed
031 to have been significantly altered from those laid down by
032 this style guide. Note that this $\text{\LaTeX}$ guide already sets fig-
033 ure captions and references in a smaller font. The reason

such papers will not be reviewed is that there is no provi-
sion for supervised revisions of manuscripts. The review-
ing process cannot determine the suitability of the paper for
presentation in eight pages if it is reviewed in eleven.

1.4. The ruler

The $\text{\LaTeX}$ style defines a printed ruler which should be
present in the version submitted for review. The ruler is
provided in order that reviewers may comment on partic-
ular lines in the paper without circumlocution. If you are
preparing a document using a non- $\text{\LaTeX}$ document prepara-
tion system, please arrange for an equivalent ruler to appear
on the final output pages. The presence or absence of the
ruler should not change the appearance of any other content
on the page. The camera-ready copy should not contain a
ruler. ($\text{\LaTeX}$ users may use options of `wacv.sty` to switch
between different versions.)

Reviewers: note that the ruler measurements do not align
well with lines in the paper — this turns out to be very dif-
ficult to do well when the paper contains many figures and
equations, and, when done, looks ugly. Just use fractional
references (*e.g.*, this line is 087.5), although in most cases
one would expect that the approximate location will be ad-
equate.

1.5. Paper ID

Make sure that the Paper ID from the submission system
is visible in the version submitted for review (replacing the
“*****” you see in this document). If you are using the
 $\text{\LaTeX}$ template, **make sure to update paper ID in the ap-
propriate place in the tex file.**

1.6. Mathematics

Please number all of your sections and displayed equations
as in these examples:

$$E = m \cdot c^2 \quad (1)$$

and

$$v = a \cdot t. \quad (2)$$

069	It is important for readers to be able to refer to any	[1] Authors. “The frobnicatable foo filter”, F&G	119

		A: To conform with the double-blind review policy, you can	168

Figure 1. Example of caption. It is set in Roman so that mathematics (always set in Roman: $B \sin A = A \sin B$) may be included without an ugly clash.

report results of other challenge participants together with your results in your paper. For your results, however, you should not identify yourself and should not mention your participation in the challenge. Instead present your results referring to the method proposed in your paper and draw conclusions based on the experimental comparison to other results.

1.8. Miscellaneous

Compare the following:

$\$conf_a\$$ $conf_a$
 $\$\mathit{conf}_a\$$ $conf_a$

See The T_EXbook, p165.

The space after *e.g.*, meaning “for example”, should not be a sentence-ending space. So *e.g.* is correct, *e.g.* is not. The provided `\eg` macro takes care of this.

When citing a multi-author paper, you may save space by using “et alia”, shortened to “*et al.*” (not “*et. al.*” as “*et*” is a complete word). If you use the `\etal` macro provided, then you need not worry about double periods when used at the end of a sentence as in Alpher *et al.* However, use it only when there are three or more authors. Thus, the following is correct: “Frobnication has been trendy lately. It was introduced by Alpher [1], and subsequently developed by Alpher and Fotheringham-Smythe [2], and Alpher *et al.* [4].”

This is incorrect: “... subsequently developed by Alpher *et al.* [2] ...” because reference [2] has just two authors.

2. Formatting your paper

All text must be in a two-column format. The total allowable size of the text area is $6\frac{7}{8}$ inches (17.46 cm) wide by $8\frac{7}{8}$ inches (22.54 cm) high. Columns are to be $3\frac{1}{4}$ inches (8.25 cm) wide, with a $\frac{5}{16}$ inch (0.8 cm) space between them. The

main title (on the first page) should begin 1 inch (2.54 cm) from the top edge of the page. The second and following pages should begin 1 inch (2.54 cm) from the top edge. On all pages, the bottom margin should be $1\frac{1}{8}$ inches (2.86 cm) from the bottom edge of the page for 8.5×11 -inch paper; for A4 paper, approximately $1\frac{5}{8}$ inches (4.13 cm) from the bottom edge of the page.

2.1. Margins and page numbering

All printed material, including text, illustrations, and charts, must be kept within a print area $6\frac{7}{8}$ inches (17.46 cm) wide by $8\frac{7}{8}$ inches (22.54 cm) high. Page numbers should be in the footer, centered and $\frac{3}{4}$ inches from the bottom of the page. The review version should have page numbers, yet the final version submitted as camera ready should not show any page numbers. The L^AT_EX template takes care of this when used properly.

2.2. Type style and fonts

Wherever Times is specified, Times Roman may also be used. If neither is available on your word processor, please use the font closest in appearance to Times to which you have access.

MAIN TITLE. Center the title $1\frac{3}{8}$ inches (3.49 cm) from the top edge of the first page. The title should be in Times 14-point, boldface type. Capitalize the first letter of nouns, pronouns, verbs, adjectives, and adverbs; do not capitalize articles, coordinate conjunctions, or prepositions (unless the title begins with such a word). Leave two blank lines after the title.

AUTHOR NAME(s) and AFFILIATION(s) are to be centered beneath the title and printed in Times 12-point, non-boldface type. This information is to be followed by two blank lines.

The ABSTRACT and MAIN TEXT are to be in a two-column format.

MAIN TEXT. Type main text in 10-point Times, single-spaced. Do NOT use double-spacing. All paragraphs should be indented 1 pica (approx. $\frac{1}{6}$ inch or 0.422 cm). Make sure your text is fully justified—that is, flush left and flush right. Please do not place any additional blank lines between paragraphs.

Figure and table captions should be 9-point Roman type as in Figs. 1 and 2. Short captions should be centred. Callouts should be 9-point Helvetica, non-boldface type. Initially capitalize only the first word of section titles and first-, second-, and third-order headings.

FIRST-ORDER HEADINGS. (For example, **1. Introduction**) should be Times 12-point boldface, initially capitalized, flush left, with one blank line before, and one blank line after.

SECOND-ORDER HEADINGS. (For example, **1.1. Database elements**) should be Times 11-point boldface,

Figure 2. Example of a short caption, which should be centered.

initially capitalized, flush left, with one blank line before, and one after. If you require a third-order heading (we discourage it), use 10-point Times, boldface, initially capitalized, flush left, preceded by one blank line, followed by a period and your text on the same line.

2.3. Footnotes

Please use footnotes¹ sparingly. Indeed, try to avoid footnotes altogether and include necessary peripheral observations in the text (within parentheses, if you prefer, as in this sentence). If you wish to use a footnote, place it at the bottom of the column on the page on which it is referenced. Use Times 8-point type, single-spaced.

2.4. Cross-references

For the benefit of author(s) and readers, please use the

`\cref{...}`

command for cross-referencing to figures, tables, equations, or sections. This will automatically insert the appropriate label alongside the cross-reference as in this example:

To see how our method outperforms previous work, please see Fig. 1 and Tab. 1. It is also possible to refer to multiple targets as once, *e.g.* to Figs. 1 and 2a. You may also return to Sec. 2 or look at Eq. (2).

If you do not wish to abbreviate the label, for example at the beginning of the sentence, you can use the

`\Cref{...}`

command. Here is an example:

Figure 1 is also quite important.

¹This is what a footnote looks like. It often distracts the reader from the main flow of the argument.

Method	Frobnability
Theirs	Frumpy
Yours	Frobbly
Ours	Makes one’s heart Frob

Table 1. Results. Ours is better.

2.5. References

List and number all bibliographical references in 9-point Times, single-spaced, at the end of your paper. When referenced in the text, enclose the citation number in square brackets, for example [5]. Where appropriate, include page numbers and the name(s) of editors of referenced books. When you cite multiple papers at once, please make sure that you cite them in numerical order like this [1–3, 5, 6]. If you use the template as advised, this will be taken care of automatically.

2.6. Illustrations, graphs, and photographs

All graphics should be centered. In L^AT_EX, avoid using the `center` environment for this purpose, as this adds potentially unwanted whitespace. Instead use

`\centering`

at the beginning of your figure. Please ensure that any point you wish to make is resolvable in a printed copy of the paper. Resize fonts in figures to match the font in the body text, and choose line widths that render effectively in print. Readers (and reviewers), even of an electronic copy, may choose to print your paper in order to read it. You cannot insist that they do otherwise, and therefore must not assume that they can zoom in to see tiny details on a graphic.

When placing figures in L^AT_EX, it’s almost always best to use `\includegraphics`, and to specify the figure width as a multiple of the line width as in the example below

```
305 \usepackage{graphicx} ...
306 \includegraphics[width=0.8\linewidth]
307 {myfile.pdf}
```

308 2.7. Color

309 Please refer to the author guidelines on the WACV 2026
310 web page for a discussion of the use of color in your docu-
311 ment.

312 If you use color in your plots, please keep in mind that a
313 significant subset of reviewers and readers may have a color
314 vision deficiency; red-green blindness is the most frequent
315 kind. Hence avoid relying only on color as the discrimina-
316 tive feature in plots (such as red vs. green lines), but add a
317 second discriminative feature to ease disambiguation.

318 3. Final copy

319 You must include your signed IEEE copyright release form
320 when you submit your finished paper. We MUST have this
321 form before your paper can be published in the proceedings.

322 Please direct any questions to the pro-
323 duction editor in charge of these proceed-
324 ings at the IEEE Computer Society Press:
325 <https://www.computer.org/about/contact>.
